

Homework 3 Grading Guidelines

5 pts	Programs follow style guidelines (given on Scholar) and program organization
10 pts	Correctly implements constructors and destructors for all classes used in the program
15 pts	Correctly implements exception handling for all cases discussed in the specification
40 pts	Correctly determines a flight route to each city that can be visited from the origin city (but does not determine the associated cost) for all test cases and prints these to the output file. Test cases include those available in Scholar and those used by GTA (but not posted in Scholar).
30 pts	Correctly determines flight route to each city that can be visited from the origin city <u>and</u> determines the associated cost for all test cases, printing both correctly to the output file. Test cases include those available in Scholar and those used by GTA (but not posted in Scholar).
100 pts	Total Points Possible
